

Seedless — Pitch Video Script

~2:30 · ~300 words at 115 wpm · slide-aligned · pause ½s on each slide change

SLIDE 1 — TITLE 0:00 – 0:10

Hey, I'm Francis. With my co-founder Udoka, we're building the wallet your mom could actually use on Solana. It's called Seedless. The wallet with no seed phrase.

SLIDE 2 — PROBLEM 0:10 – 0:25

Every wallet today asks you to write down 12 random words on paper. Lose them, your money is gone. Sixty-one percent of new users give up at that screen and run back to a custodial wallet.

SLIDE 3 — SOLUTION 0:25 – 0:40

We replaced the seed phrase with your face. One scan, you have a real Solana wallet on mainnet. Send, receive, swap, even send privately, all from one app on your phone.

SLIDE 4 — RETENTION MOAT 0:40 – 0:55

But here's the part that keeps people. From the same wallet, you'll send straight to any bank account. Crypto in, cash out. No off-ramp queue, no app switching. NGN first, in private beta.

SLIDE 5 — THREE LAYERS 0:55 – 1:05

The stack underneath is real. Native passkeys on iOS and Android. LazorKit for smart-wallet rails on Solana. Umbra for privacy, live on mainnet.

SLIDE 6 — WHAT NO ONE ELSE DOES 1:05 — 1:25

Four things every other wallet makes hard, we made simple. Sign with your face, not a phrase. Spend without thinking about gas. Send privately by default. Recover without a backup file. We're not trying to be a better Phantom. We're your bank, on crypto rails.

DEMO CUT-IN 1:25 — 1:45

Twenty seconds of the live app: FaceID, gas-free swap, burner wallet, private send, stealth payment QR. All on mainnet, no seed phrase touched.

SLIDE 7 — WHO WE'RE FOR 1:45 — 1:55

We're built for the hundred million who installed a wallet and never used it, and the next billion who need money, not investments.

SLIDE 8 — REVENUE 1:55 — 2:05

We make money two ways. Zero point seven five percent on every swap, below the leader. Plus one percent on every fiat-to-crypto on-ramp.

SLIDE 10 — REAL NUMBERS 2:05 — 2:15

Today: fifty to a hundred beta users on private mainnet. Over a thousand passkey signatures on chain. Two hundred USDG from Superteam. Twenty-five thousand in Alchemy credits.

SLIDE 11 — WHY US 2:15 — 2:25

Four months, idea to Solana mainnet. I built payments at Paystack, a perp DEX at sub-100ms, a Wormhole bridge doing two hundred K a month. Udoka ran SuperteamNG community to thirty K GDP. We've shipped every layer Seedless sits on.

Seedless. The wallet your mom could actually use. Join the beta at seedlesslabs.xyz.

DELIVERY NOTES

- ~115 wpm · half-second pause on each slide change so visuals land first
- Hit hard on highlighted phrases — those are the lines reviewers will quote
- Demo clip at 1:25 — trim 20s reel from existing 2:11 demo: onboard 3s + swap 4s + burner 3s + private send 5s + stealth QR 5s
- Skip slides 9 (wedges) + 12 (roadmap) in voiceover — judges read them on screen, narration would eat 25s
- Record one beat at a time, paste together in iMovie
